Bengaluru, India

## Summary

AI/ML and software engineer focused on building practical systems across forecasting, agentic workflows, recommendation engines, and backend infrastructure. Experienced with Python, SQL, Go, FastAPI, LangGraph, XGBoost, feature engineering, time-series forecasting, API design, and scalable production-oriented ML workflows.

## Experience

### • NetApp

Jun 2025 – May 2026

*Machine Learning Intern*

Bengaluru, India

- Built and deployed a one-click forecasting pipeline for \$150M+ quarterly revenue planning using 1.5M+ records.
- Improved sales commission forecast accuracy by 15% with an XGBoost ensemble, reducing MAPE to 6–10% for GTM financial accruals across 4,900+ sales representatives.
- Engineered derived features, cold-start prediction logic, and quantile-based forecasts to support new-user prediction and model market upside/downside scenarios.
- Applied interpolation, anomaly detection, and smoothing techniques to clean irregular time-series data and improve forecast stability across revenue predictions.
- Designed scalable ML workflows for preprocessing, training, validation, and batch inference, reducing end-to-end runtime from 6–8 hours to 2 hours.

## Projects

### • Agentic Workflow Automation Assistant

[Code](#)

*Tools: Python, LangGraph, FastAPI, Gmail API, Google Calendar API, SQLite, Pydantic*

- Built a LangGraph-based automation agent integrating Gmail and Google Calendar APIs to search email threads, summarize invoice context, draft reminder emails, and schedule follow-ups with human approval checkpoints.
- Implemented typed agent state, Pydantic tool schemas, OAuth-based Google API access, retry/fallback handling, SQLite audit logs, and deterministic routing for reliable multi-step agent workflows.

### • Production RAG Knowledge Assistant

[Code](#)

*Tools: Python, FastAPI, LangChain, PostgreSQL, pgvector, Next.js, Docker*

- Built a production RAG assistant with PDF ingestion, semantic chunking, pgvector-based hybrid retrieval, citation-grounded answer generation, and FastAPI inference endpoints.
- Implemented retrieval evaluation, hallucination checks, citation coverage scoring, latency/token-cost logging, and query-level observability across a Dockerized backend and Next.js frontend.

### • AI Waiter

[Code](#)

*Tools: Next.js, TypeScript, FastAPI, Gemini*

- Built an AI restaurant ordering agent with Gemini function calling, FastAPI tool endpoints, and structured menu schemas for allergy-aware recommendations, cart updates, and repeat-customer personalization.
- Shipped a restaurant-owner MVP with conversational ordering, live cart state, menu-card UI, smart upselling, persistent visitor profiles, and WhatsApp checkout handoff.

### • FairMeet: Fairness-Aware Group Activity Planner

[Code](#)

*Tools: Python, LangGraph, Flask, SQLite, Pydantic*

- Built a LangGraph-based group planning engine with typed graph state, conditional routing, revision loops, persistent memory, and human approval checkpoints.
- Designed multi-factor recommendation scoring across interests, travel distance, budget, energy level, and fairness history, with Flask/Jinja dashboard and CLI simulation flows.

## Education

### • Manipal Institute of Technology

Manipal, India

*B.Tech in Computer Science and Engineering, Specialization in AI/ML | CGPA: 8.22*

2022 – 2026

## Skills

- **Languages:** Python, SQL, C, C++, Java, Go, JavaScript, TypeScript, HTML, CSS
- **ML and AI:** PyTorch, TensorFlow, Scikit-learn, XGBoost, LightGBM, LangGraph, NetworkX, FastAPI, Redis
- **Data Science:** Pandas, NumPy, OpenCV, Feature Engineering, Time-Series Forecasting, Model Evaluation
- **Tools and Platforms:** Docker, Git, Linux, Abacus.ai, CI/CD, GitHub, Vercel, LeetCode (rating 1756)

## Coursework

Data Structures and Algorithms, Machine Learning, Operating Systems, Database Management Systems, Artificial Intelligence, Deep Learning, Reinforcement Learning, Big Data Analytics, Computer Vision, Object-Oriented Programming, Social Network Analysis, Software Engineering, Graph Theory.
